

Heavy Metal Concentration Report

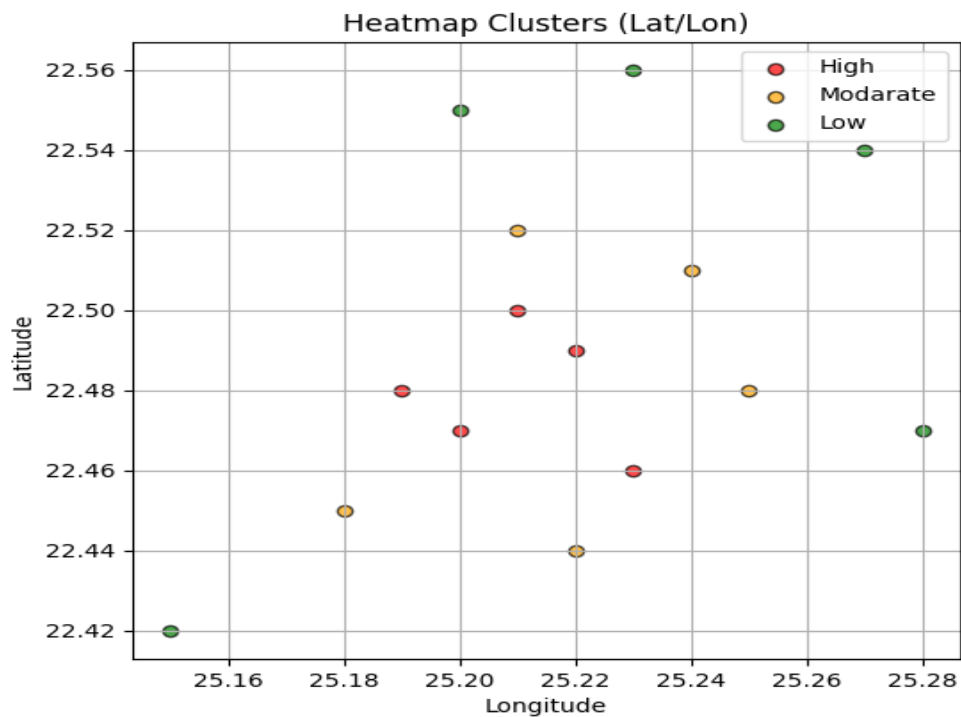

Indices Summary

Contamination Degree (Cd): 2.409
Health Exposure Index (HEI): 11.409
Heavy Metal Pollution Index (HMPI): 268.349

Heavy Metal Concentrations

Heatmap Analysis

- Develop and implement a robust remediation plan, including source identification and appropriate treatment technologies like reverse osmosis or advanced filtration for heavy metals.
- Ensure the provision of an immediate alternative safe drinking water supply to all affected consumers during the remediation period.
- Establish a long-term public health surveillance program to monitor for health effects in the exposed population, focusing on early detection and intervention.
- Review and strengthen existing environmental regulations and enforcement mechanisms to prevent future contamination and ensure water quality standards are met.
